

Skycat Rescue Radio

The Skycat Rescue Radio supports the TBS Crossfire Micro TX (100mW) and TBS Crossfire TX (500mW) transmitter modules. Both come pre-configured to operate in non-limited adaptive power mode (outputs 100mW / 500mW if required). Please check your country's regulations and re-configure if required. Do not operate using an illegal power output. Neither Fruity Chutes nor Skycat will take responsibility for illegal operations. Please contact Fruity Chutes for more assistance.

LED Key

- Continuous green Battery full
- Blinking green Battery half full
- Continuous red Battery almost empty, recharge required
- Blinking red Launch activated, power cycle to reset

As a safety feature, the Rescue Radio will not automatically shut down until the battery is completely empty. This can damage the Li-Po battery. Always charge the unit when the continuous red LED indicates the battery is almost empty. Be sure to turn off the unit after use.
